

Energy Management - Policy

Why is this an issue for Van Loon Group?

Fossil fuels are finite and climate change is a growing social problem. In the context of the energy transition, it is therefore important that we use fewer and fewer fossil fuels.

Scope

The use of electricity and gas at all Van Loon Group sites.

Our policy

Our energy management policy focuses on reducing electricity and gas intensity by 5% by 2030 compared to 2022, and on using 100% renewable Dutch electricity in the same year. We are investing in efficient technologies, optimising our processes and committing to sustainable energy sources. We monitor progress on this every quarter.

Person ultimately responsible for policy implementation: COO
