

Water - Policy

Why is this an issue for Van Loon Group?

A significant amount of water is used in our production processes, particularly when cleaning packaging, machinery and production areas. This water must then be treated and discharged; this is a process that consumes a great deal of energy.

Scope

This concerns the use of water at all Van Loon Group production sites.

Our policy

We aim to minimise both water usage (volume) and the level of water pollution.

Person with ultimate responsibility for policy implementation:

CSO Signed on behalf of Van Loon Group:

Name: Robert van Ballegooijen

Position: CEO
